

Occupational Health and Safety Overview

Commitment to Health, Safety and the Environment (OHS&E)

Gillespie Crane Services is committed to providing the highest standards of health and safety for all employees, sub-contractors and visitors at our designated places of work. By establishing strategies and programs to implement OHS&E and Injury Management processes where necessary, our aim is to continually improve OHS&E performance and eliminate workplace injury and illness. Our OHS&E Policy aims to both demonstrate and communicate our commitment to our valued clients and employees.

Planning for your and our safety

Gillespie Crane Services have established and implemented procedures for the identification, assessment and control of hazards for operations and services, over which we have control. We have designated resources to identify legal and other requirements to which we will comply with, including Acts, Regulations, National Codes of Practice, relevant Australian Standards and best practice industry standards. Our OHS&E objectives and targets have been developed to specifically reflect our OHS&E Policy and overall commitment to safety and the environment.

Implementing safety – from start to finish

Whilst our senior management are ultimately responsible for Occupational Health and Safety and Environmental Management, the entire Gillespie team stands responsible and accountable for implementing safety through ongoing training and competency assessment programs. All of our operations personnel are competent to provide safe and efficient services. We encourage everyone to be involved in decision-making processes, through our open door policy and through the OHS Consultative Committee Structure. Implementation commences with a fully documented OHS&E Management System, compliant to NSW Legislative Requirements which has been communicated to all our employees.

Measurement and evaluation

Gillespie Cranes Services have implemented programs to ensure our operational processes remain safe and compliant with Legislation through internal and external review processes. Our comprehensive maintenance program ensures all of the Gillespie Fleet is maintained to the highest quality standard through rigorous scheduled inspection and testing processes. We believe in preventive action in order to prevent, rather than correct system failure.

Management Review – moving with the times

Changing circumstance is inevitable. To ensure our OHS&E management systems remain relevant and effective, all of our systems and processes are subject to ongoing management review. Our aim is for continual improvement and optimal OHS&E performance to ensure your safety and ours.
